PROFESSIONAL SUMMARY

Motivated Electronics and Communication Engineering graduate with strong programming skills in Python, hands-on experience in embedded systems, IoT development, and data analysis. Proven ability to design, build, and troubleshoot end-to-end hardware-software solutions. Experienced in working within engineering teams, managing data pipelines, and delivering technology-driven projects. Completed Deloitte Data Analytics Job Simulation (Forage), demonstrating applied analytical and problem-solving capabilities. Seeking an entry-level IT role to contribute technical skills and grow within a dynamic technology environment.

EDUCATION

Bachelor of Engineering - Electronics and Communication Engineering 2022 - 2026

Thanthai Periyar Government Institute of Technology (TPGIT), Vellore | CGPA: 7.62

Higher Secondary Certificate (HSC) 2022

Chanakya Matric. Hr. Sec. School | Score: 83%

Secondary School Leaving Certificate (SSLC) 2020

Chanakya Matric. Hr. Sec. School | Score: 87%

INTERNSHIP EXPERIENCE

Internship Trainee - Strydo Technologies Pvt. Ltd. 2025 | 1 Month

- Developed and tested embedded software for IoT devices, writing MicroPython scripts for sensor interfacing and data acquisition.
- Collaborated with engineering teams on product development workflows, debugging hardware-software integration issues.
- Monitored and validated system performance data, applying structured troubleshooting and analysis techniques.

PROJECTS

Crop Protection & Monitoring System - Python & IoT Development

- Programmed an ESP32 microcontroller in MicroPython to collect and process real-time sensor data (temperature, humidity, CO₂, load).
- Built automated alert logic with threshold-based triggers; streamed data to ThingSpeak for remote monitoring and visualization.

Smart Door Unlock System - RFID Access Control

- Developed an embedded C application for RFID-based access control with tag validation logic and structured event logging.
- Designed a secure, auditable entry system demonstrating applied knowledge of data security and access management principles.

Smart Cold Chain Monitoring System – Embedded System

- Developed an ESP32-based IoT system to monitor temperature, humidity, and GPS location in real time using cloud connectivity.
- Implemented Blynk IoT alerts and a web dashboard for remote monitoring, ensuring safe storage and transportation of temperature sensitive products.

CERTIFICATION

Deloitte - Data Analytics Job Simulation (Forage) 2026

- Completed tasks covering data analysis workflows, analytical problem-solving, and business insight communication.

TECHNICAL SKILLS

Programming Languages: Python, C, SQL, MicroPython

Data & Visualisation Tools: Power BI, Microsoft Excel, ThingSpeak
